

# Act Fast™

Anti Choking Trainer

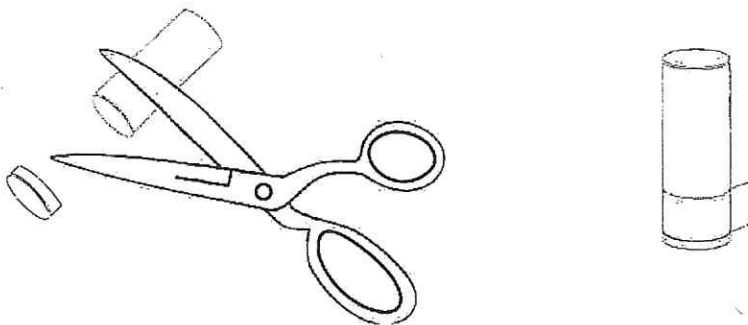

## Your Kit should include:

1. The patented Act+Fast Anti Choking Trainer
2. An internal Air Bladder
3. Clear Plastic Airway. (This should fit snugly into the coupler on the Air Bladder).
4. 30 Foam Plugs
5. If you have the Red Back Slap Pad model, this should include both a plastic plate and foam pad inside.
6. User Manual, please refer to for detailed instructions.
7. Nylon drawstring Carry Bag

**Foam Plugs:** The plugs can be **customized** to your student's needs.

- To make them **easier** to shoot out, the plugs can be rolled in your fingers to soften, or trimmed a tiny bit in length.
- To make them **more challenging** to use, a small piece of tape can be wrapped around.

## IMPORTANT:

First try the Anti Choking Trainer on yourself to ensure it is working properly before using it on another person. **It should not require force to use.** The air bladder should be soft enough that proper technique will easily expel a foam plug.

**It is important not to be forceful: to avoid injury while training and while trying to rescue a choking victim.**
